Course title

Move your OpenEdge application to the cloud: OpenEdge 12 Course

Duration

Equivalent to 1.5 hours of learning

Audience

OpenEdge ABL application developer

Description

In this course, you will learn what resources you can use to move an existing OpenEdge application from an on-premise installation into a cloud solution.

This course is also available online with a subscription to the Progress Education Community.

Version compatibility

This course is compatible with OpenEdge 12.2.

What you will learn

After taking this course, you should be able to:
- Describe what the cloud is.
- Describe what benefits the cloud provides.
- Describe the following strategies for moving an application to the cloud:
    - Lift and shift
    - Containers with automatic scaling
    - High availability migration
- Analyze your existing OpenEdge application to prepare for moving your application to the cloud.
- Describe what an ABL service is.
- Describe the available options for creating an ABL service.
- Understand how to create an ABL service using a WEB transport.
- Describe the available options for packaging and deploying your OpenEdge application in the cloud.

Prerequisites

Before you begin this course, you should meet the following prerequisites:
- Familiarity with basic OpenEdge application architecture (OEAA)
- Familiarity with REST concepts
